

Example PDF for Testing

This is a sample PDF file created for testing PDF processing. It contains multiple paragraphs of text that will be extracted and summarized by the AI system.

The system should:

1. Extract text from this PDF
2. Send it to Azure OpenAI
3. Generate a summary
4. Store the result in Cosmos DB

This PDF processing feature enhances the existing image processing capabilities of the system to handle document content in addition to visual content.
